PATIENT GUIDE

Your vision. Your everyday life.

**A favourite book.
A day at work.
Time with family.**

Your vision is part of it all.
Your eye-care choices
should reflect your needs.

Start with what matters to you.

01

Glasses & contacts

Would you like to explore alternatives that fit your daily routine?

02

Everyday changes

What feels different when you read, use a screen or drive at night?

03

Your priorities

What would you like to understand about treatment, recovery or costs?

Your questions come first.

Surgitrix helps you connect with an eye-care specialist to discuss your concerns and explore your options.

Life beyond glasses?

Understand your options.

Refractive surgery aims to reduce dependence on glasses or contact lenses. Different procedures work in different ways.

LASIK

LASER • CORNEA

A laser reshapes the cornea beneath a thin flap, which is then repositioned.

SMILE

LASER • CORNEA

A laser creates a small piece of corneal tissue that is removed through a small incision.

PRK

SURFACE LASER • CORNEA

A laser reshapes the corneal surface after removal of its outer cell layer, without creating a flap.

ICL

IMPLANTABLE LENS

An additional lens is placed inside the eye, in front of the natural lens. The natural lens stays in place.

● The right choice starts with your eyes.

Your prescription, cornea and overall eye health guide suitability. Discuss benefits, risks and recovery with your ophthalmologist. Glasses may still be needed after treatment.

Before you choose, bring your questions.

Considering LASIK or another vision-correction procedure?
Use this page to prepare for your specialist consultation.

● **Tick the topics you want to discuss.**

☐ **Your everyday vision**

What would you like to change about using glasses or contacts?

☐ **Your eye history**

Which prescription changes, eye conditions or medicines should I mention?

☐ **Suitability & alternatives**

Which options suit my eyes, and what are their risks and limitations?

☐ **Your expectations**

What improvement is realistic? Could I still need glasses?

☐ **Recovery & costs**

What aftercare will I need, and what does the full price include?

My question for the eye specialist

A conversation starter, not a suitability test.

Only an ophthalmologist can assess whether a procedure is appropriate for your eyes after an examination.

When everyday vision starts to change.

A cataract is clouding of the eye's natural lens. It can cause blurred vision, glare or difficulty seeing at night.

Clear lens

Cloudy lens

Simplified lens illustration

What surgery does

The cloudy lens is removed and replaced with an artificial lens, called an intraocular lens (IOL).

1

Discuss the changes

Tell your specialist how your vision affects reading, driving and everyday tasks. Ask whether surgery is appropriate.

2

Explore lens choices

Discuss your eye health, lifestyle and visual expectations, including when you may still need glasses.

3

Plan treatment and follow-up

Ask about benefits, risks, preparation and recovery. Your treating team will explain your aftercare plan.

A QUESTION TO TAKE WITH YOU

**“Which lens option best suits my eyes
and the things I do every day?”**

Eye care goes beyond clearer sight.

Different eye concerns need different expertise.
Explore the care areas that may be relevant to you.

01

Retina care

Assessment of the light-sensitive tissue at the back of the eye, including diabetes-related changes.

02

Glaucoma care

Monitoring and treatment for optic nerve damage. Early glaucoma may have no noticeable symptoms.

03

Cornea & keratoconus

Care for the clear front surface of the eye, including changes in its shape, clarity or strength.

04

Squint & eye alignment

Assessment of eyes that do not line up together, with treatment guided by the cause and visual needs.

05

Eyelids & tear ducts

Oculoplasty addresses concerns involving the eyelids, tear drainage system and structures around the eye.

● **Start with the right assessment.**

Your eye specialist will explain the findings, suitable options and follow-up needed for your individual condition.

Know what comes next.

One step at a time.

From your first questions to your follow-up visits, a clear plan helps you make informed decisions.

1

Start with a conversation

Share your concerns, vision goals and previous eye records. Ask what to expect from your consultation.

2

Understand your assessment

Your specialist reviews your eye health and any tests needed to explain the findings and suitable options.

3

Make an informed choice

Discuss benefits, risks, alternatives and costs. If you choose treatment, confirm the plan and preparation.

4

Stay connected after care

Follow your treating team's instructions, attend planned reviews and know whom to contact with concerns.

Bring to your consultation

Your prescription, eye reports, medication list and the questions that matter most to you.

Your care. Your questions. Your decision.

Ask for a clear explanation before taking the next step.

A clearer next step **starts with you.**

Tell us what you need help with.
We'll help you understand the next step
in your eye-care journey.
